SJJ Solutions provides sterile single-use injection needles with low dead volume (LDV/residual volume/dead space). All needles are precision-engineered using high quality steel, to ensure optimal sharpness and a smooth injecting experience.

To achieve optimal low dead volume, it is recommended to use the SJJ Solutions needles with the SJJ Solutions syringe.

The needles are securely protected by a needle shield and individually packed in sterile blisters. This ensures optimal conditions for injections, maintaining the needle's cleanliness right up to the moment of use.

Compatibility

- USP 789 compliant
- CE & FDA approved
- Each batch is tested to ensure optimal sharpness prior to release
- Compliant with injection assistant tools
